

CourtAlert[®] CM/ECF Version 5

Combining East Coast Docketing with Court Rules Automation:

CourtAlert Case Management and ECF Interface software is a leading docketing system that was uniquely designed for New York/East Coast style of docketing – dockets where diaries are attached to the docket.

CourtAlert Case Management and ECF Interface software now has the ability to automatically calculate deadlines based on court rules.

- User creates dockets from ECF court notices (“reconciliation”) or manually. The PDF files are automatically attached to the docket
- User may manually create diaries by using the date counter or by inputting a due date
- For some jurisdictions, such as California, the user can select from a list of triggering events, and let the system automatically calculate the deadlines based on updated court rules
- The user can deselect due dates that are not applicable
- With one click, diaries are created for each deadline
- The system stores the user’s selection; if a deadline is deemed inapplicable it is automatically defaulted to be deselected in the future

The rules are updated real time by a company specializing in rules updates. Rules are available for State, Federal, Appellate and Bankruptcy Courts across the nation.

CourtAlert CM/ECF also provides displays and reports in the style typically preferred by West Coast users.

In addition to recording of documents and avoiding missing deadlines, CourtAlert Case Management serves as a knowledge base of quality work product and functions as a marketing tool to demonstrate quality work product to prospective clients.

In light of this announcement, CourtAlert CM/ECF continues to be the stronger software choice for nation-wide and international firms.
